

Testing Protocol

Testing Guidelines:

1. Zoom meeting invitations are sent to the participants and team members.
2. The Google Survey form is forwarded to the participants.
3. At least one member from Group 9 must be present during the meeting to assist and evaluate the participants.
4. The participants must first share their screen and fill the first section of the survey.
5. Each participant is provided with 15 text samples and are supposed to assess the sentiment associated with data.
6. Each participant must perform emotional polarity computation for the text samples.
7. The participant is monitored during the session and data is collected:
 - a. Note the time taken to complete the task.
 - b. Identify the text extract length (small/moderate/large) the participant chooses.
 - c. Number of text extracts evaluated during the active sessions.
 - d. Accuracy of emotional polarity computation.
 - e. Number of hints requested by the participant.
8. Evaluate the sentiment associated with the text on CELT sentiment analysis platform.
9. The results are compared with a generic sentiment analysis [platform](#).
10. The participant is asked to complete the rest of the survey and provide feedback.

Essential Information:

1. [Participant](#) in the Team 9 (Project 3)
2. CELT - Team 9 - [Assessment Form](#)

Data Insight:

- Note the time taken to complete the task.
- Identify the text extract length (small/moderate/large) the participant chooses.
- Number of text extracts evaluated during the active sessions.
- Accuracy of emotional polarity computation.
- Number of hints requested by the participant.
